WEBSITE TRAFFIC SUMMARY

Data Analytics Internship | Task 33 | Veda Technology

Intern	Chandana
Track	Data Analytics
Task	Task 33 – Website Traffic Summary
Tools	Microsoft Excel and Power BI

1. Introduction

This report describes Task 33 of the Data Analytics internship at Veda Technology. The task, titled **Website Traffic Summary**, focuses on understanding website visits by traffic source, day, and device category. The activity provides practical experience with basic web analytics and dashboard-oriented data visualization.

2. Objective

The main objective is to examine website traffic data and summarize how visitors reach a website, how visits change over time, and which device categories are used. The task also aims to practice presenting analytical information in a clear and understandable format.

3. Tools and Technologies

Tool	Purpose
Microsoft Excel	Reviewing the dataset, organizing records, and preparing summaries.
Power BI	Creating visual reports and an interactive dashboard for traffic analysis.

4. Methodology

• **Dataset review:** Open the website traffic dataset and identify the available fields, including traffic source, date or day, device, and visit count.

• **Data preparation:** Check column names, data types, missing values, and consistency. Format date and numeric fields appropriately.

• **Source analysis:** Group visits by traffic source to compare the contribution of channels such as direct, search, referral, or social traffic when those categories are present.

• **Daily trend analysis:** Summarize visits by date and use a trend visual to observe increases, decreases, and patterns over time.

• **Device analysis:** Compare visits across device categories such as desktop, mobile, and tablet when available.

• **Dashboard preparation:** Present the summaries and visuals in Power BI so the traffic information can be explored easily.

5. Suggested Dashboard Components

Dashboard element	What it communicates
Total visits card	Overall number of visits in the selected dataset or filter context.
Traffic source chart	Comparison of visits from each traffic source.
Daily visits trend	How website traffic changes from day to day.
Device breakdown	Share or count of visits by device category.
Filters / slicers	Allow users to explore the report by date, source, or device where supported.

6. Expected Deliverables

The task specifies two deliverables: (1) a traffic summary describing visits by source, day, and device; and (2) a Power BI dashboard presenting the analysis visually. The dashboard should make it straightforward to compare traffic sources and inspect the daily trend.

7. Learning Outcomes

• Improved understanding of basic website and web traffic analytics.

• Practice organizing and summarizing data in Microsoft Excel.

• Experience comparing categories and interpreting daily trends.

• Improved ability to communicate findings through Power BI visuals and dashboards.

8. Conclusion

Task 33 provides a practical introduction to website traffic analysis. By examining visits by source, day, and device, and presenting the results in a dashboard, the task strengthens foundational skills in data preparation, analysis, and visualization. The completed summary and dashboard can help viewers understand website traffic patterns and compare the available traffic categories.

Note: This report is prepared from the Task 33 instructions shown in the supplied screenshot. No numerical traffic findings are stated because the underlying dataset and completed dashboard were not provided.
